

HARISHAN ARUNKANNAN

Brampton, Ontario | harishanarunkannan@gmail.com | 647-467-1034

Professional Summary

Second-year Software Engineering student with hands-on experience in full-stack web development, object-oriented programming, CAD, and embedded systems. Proven communicator with competitive public-speaking experience, strong critical-thinking and decision-making skills, and experience translating technical and business problems into clear, practical solutions.

Education

Western University (University of Western Ontario)

Expected 2030

Bachelor of Engineering Science (BESc), Computer Software Engineering

Skills

Programming Languages: C++, Python, Java, JavaScript, TypeScript, HTML, CSS

Developer Tools & Platforms: Git, GitHub, MySQL, React, Node.js, Express.js

CAD & Technical Tools: Onshape, Arduino

Core Strengths: Data Structures & Algorithms, Object-Oriented Programming, Embedded Systems, Public Speaking, Technical Communication

Projects

TaskFlow - Full-Stack Project Management Application

October 2026

- Built TaskFlow, a personal full-stack project management app I use daily to organize coursework, work commitments, and personal responsibilities through project workspaces, Kanban boards, task assignment, comments, and activity tracking.
- Developed it with React, JavaScript, Node.js, Express, MySQL, JWT, bcrypt, REST APIs, and dnd-kit, adding CRUD, drag-and-drop, search, filtering, and sorting while iterating around my own productivity needs until it became my primary day-to-day planning system.

Light Pollution Measuring Device

January 2026 - April 2026

- Co-developed a client-focused light-pollution monitoring system using C++/Arduino, a light sensor, microcontroller, SD Card module, transistors, and resistors to capture and log ambient-light readings.
- Implemented historical lux-data logging and presented the completed solution with the team at an engineering Design Showcase, strengthening technical communication and client-focused design skills.

Tiger Detailing Booking Platform

July 2026

- Built a full-stack booking platform for Tiger Detailing so elderly and community clients can schedule services from home, extending a four-person initiative that provided free detailing for more than a dozen vehicles owned by elderly residents.
- Developed a responsive React front end with JavaScript, HTML, and CSS, including 3 service tiers, booking validation, appointment viewing, rescheduling, and cancellation workflows.
- Engineered a Node.js/Express REST API backed by MySQL, implementing all 4 core CRUD operations through dedicated booking endpoints and managing source control with Git and GitHub.

Engineering 1050 CAD Project - Ventilation Fan

October 2025 - November 2025

- Designed and refined a functional ventilation-fan assembly in Onshape, modelling the fan blades, hub, housing, and supports using dimensional constraints, extrusions, and assembly relationships.
- Iterated component geometry to balance manufacturability, structural simplicity, airflow intent, and ease of assembly.

Extracurricular Activities

Ontario DECA

2022 - 2025

- Earned 3 Provincial Championship qualifications and 2 Region of Peel championships, consistently demonstrating high-level business communication, teamwork, and competitive decision-making.
- Averaged 93%+ on paired oral role-play presentations in which we received an unfamiliar business scenario, had only 15 minutes to analyze the problem, develop a solution, and organize a persuasive response before presenting to judges.
- Applied rapid critical thinking, active listening, and clear verbal communication to divide responsibilities with a partner, defend recommendations, respond to judge questions, and communicate solutions confidently under pressure.

Tiger Detailing Auto Services - Founder & Owner

April 2026 - July 2026

- Founded and co-ran a four-person nonprofit community initiative providing free interior and exterior vehicle cleaning for elderly residents who were physically unable to clean their own vehicles.
- Coordinated service delivery and personally helped clean more than a dozen vehicles at no cost, using the initiative as a direct way to give back to the community.

1299E / 1220 Ivey Case Competition

March 2026

- Worked with a multidisciplinary team to evaluate a business case, interpret financial and market information, and develop a feasible marketing strategy under time constraints.
- Presented recommendations using concise evidence-based reasoning, strengthening structured problem solving, presentation skills, and decision-making in an ambiguous environment.

Work Experience

Website Creator / Full-Stack Web Developer - Independent

October 2025 - Present

- Design and develop business websites for organizations without an established web presence, building responsive front ends with HTML, CSS, and JavaScript and primarily using Java for back-end functionality.
- Manage source code and version control through GitHub repositories, translating business needs into deployable website models that improve online visibility, customer discovery, and support increased in-person customer traction.

Ride Operator - Leviathan, Six Flags Canada's Wonderland

April 2026 - September 2026

- Operated a high-throughput 306-ft roller coaster within strict safety procedures, completing restraint checks, platform clearances, dispatch communication, and guest support in a safety-critical environment.
- Maintained calm, clear communication with operators, supervisors, and guests while balancing safety, service quality, and efficiency during peak operating periods.

Web Designer & Publisher - NWAC | Remote

June 2025 - September 2026

- Developed and refined responsive website components using HTML, CSS, and JavaScript alongside a peer developer, improving usability across desktop and mobile layouts.
- Translated stakeholder needs into organized page structures and maintainable publishing workflows while troubleshooting presentation issues and delivering polished digital content aligned with organizational goals.
